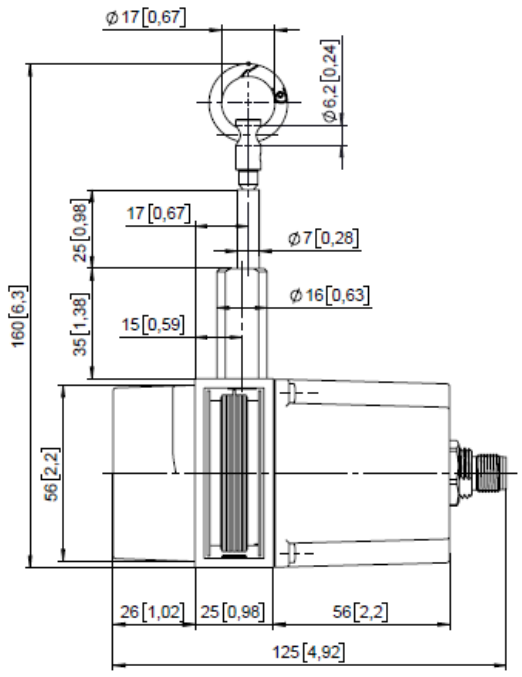
1. Mounting 4

1. Mounting



Fasten the sensor at the place provided to that purpose using the fastening holes before pulling the wire out or fastening the wire on the object to be measured.

The sensor can be mounted with 4 M4 threaded holes (max. depth 5 mm).

Caution:

The perforated plate of variants 3 housing with perforated sheet metal cover is not suitable for fastening the sensor.

Once the sensor is mounted, the wire can be pulled with caution out of the sensor and fastened on the object to be measured.

Caution:

In no case let the wire go while pulling it out and make sure that it is neither bent nor kinked while fastening it.
